

EventCombo Session API - Integration Guide

Overview

This document describes the Session API endpoint for retrieving event sessions with comprehensive filtering, pagination, and search capabilities. The API returns detailed information about sessions including schedules, speakers, venues, documents, and more.

Base URL: <https://eventcombo.com/api>

API Version: 2.0

Document Version: 1.0

Table of Contents

Quick Start

To retrieve sessions for an event, make a GET request with your Bearer token:

```
GET https://eventcombo.com/api/v2/Public/Event/43611/Sessions
Authorization: Bearer {your_token}
```

This will return the first 50 sessions for event ID 43611. See [Usage Examples](#) for more advanced scenarios.

Important Notes

- **Maximum Page Size:** The API limits responses to 50 sessions per request to ensure optimal performance
 - **Authentication:** All requests require a valid Bearer token
 - **Date Format:** All dates should be in ISO 8601 format (e.g., 2025-10-21 or 2025-10-21T12:00:00)
 - **Empty Results:** The API will return an empty array when no sessions match your criteria
-

Endpoint

GET /v2/Public/Event/{eventId}/Sessions

Authentication

Required: Yes (Bearer token)

Authorization:

- User must be authenticated
 - User must be event owner, co-host with API access, or super admin
-

Request Parameters

Path Parameters

Parameter	Type	Required	Description
eventId	long	Yes	The unique identifier of the event

Query Parameters

Parameter	Type	Required	Default	Max	Description
pageNumber	int	No	1	-	Page number (starts from 1)
pageSize	int	No	50	50	Number of sessions per page
search	string	No	""	-	Search text to filter sessions by title or description (case-insensitive)
startDate	string	No	null	-	Filter sessions starting on or after this date (ISO 8601 format:YYYY-MM-DD or YYYY-MM-DDTHH:mm:ss)
endDate	string	No	null	-	Filter sessions ending on or before this date (ISO 8601 format:YYYY-MM-DD or YYYY-MM-DDTHH:mm:ss)

Request Examples

Basic Request (First Page)

GET /v2/Public/Event/43611/Sessions

Authorization: Bearer {token}

Paginated Request

GET /v2/Public/Event/43611/Sessions?pageNumber=2&pageSize=25

Authorization: Bearer {token}

Search Sessions

GET /v2/Public/Event/43611/Sessions?search=keynote&pageSize=50

Authorization: Bearer {token}

Filter by Date Range

GET /v2/Public/Event/43611/Sessions?startDate=2025-10-21&endDate=2025-10-22

Authorization: Bearer {token}

Combined Filters

GET /v2/Public/Event/43611/Sessions?search=workshop&startDate=2025-10-21T12:00:00&endDate=2025-10-22T18:00:00&pageNumber=1&pageSize=20

Authorization: Bearer {token}

Response Structure

Success Response (HTTP 200)

Error Responses

The API uses standard HTTP status codes and returns detailed error information in the response body.

Unauthorized (HTTP 401)

Reason: Invalid or missing authentication token

```

{
  "Code": -3,
  "Message": "Access denied",
  "Success": false,
  "Result": null
}

```

Action: Verify your Bearer token is valid and included in the Authorization header.

Forbidden (HTTP 403)

Reason: User doesn't have permission to access this event

```
{
  "Code": -2,
  "Message": "Access denied - you don't have permission to view this event's sessions",
  "Success": false,
  "Result": null
}
```

Action: Ensure the authenticated user is the event owner, co-host with API access, or super admin.

Not Found (HTTP 404)

Reason: Event with the specified ID doesn't exist

```
{
  "Code": 1,
  "Message": "Event not found",
  "Success": false,
  "Result": null
}
```

Action: Verify the event ID is correct.

Server Error (HTTP 500)

Reason: Internal server error occurred

```
{
  "Code": -1,
  "Message": "Error during request processing",
  "Success": false,
  "Result": null
}
```

Action: Retry the request. If the problem persists, contact support.

Response Field Descriptions

Core Session Fields

Field	Type	Description
EventSessionId	long	Unique identifier for the session
Title	string	Session title/name
SessionLabel	string	Label/tag for the session

Field	Type	Description
Description	string	Full session description (may contain HTML)

Display Settings

Field	Type	Description
ShowOnEventPage	bool	Whether session is visible on event page
ShowOnEventAPP	bool	Whether session is visible in event app
AllowOnCheckout	bool	Whether session is shown on checkout page
AllowAutomaticAssign	bool	Whether to automatically assign session to attendees
Delink	bool	Whether session can be reassigned
AllowEdit	bool	Whether attendees can transfer to/from this session

Session Properties

Field	Type	Description
IsIndependent	bool	Whether session is independent (not mapped to tickets/categories)
IsPrivate	bool	Whether session is private
EnableSchedule	bool	Whether session is scheduled
BGColor	string	Background color for session display (hex code)

Feature Flags

Field	Type	Description
EnableQNA	bool	Whether Q&A is enabled
EnablePushNotification	bool	Whether push notifications are enabled
EnableQRCode	bool	Whether QR code is enabled
EnableSelfCheckInQRCode	bool	Whether self check-in QR code is enabled
EnableSpeakerRating	bool	Whether speaker rating is enabled
IsShowRemainingQty	bool	Whether to show remaining session capacity

QR Code Settings

Field	Type	Description
QRCodeHeight	int	QR code height in pixels
QRCodeWidth	int	QR code width in pixels
IsLogoOnQRCode	bool	Whether to show logo on QR code
QRLogoHeight	int	QR code logo height in pixels
QRLogoWidth	int	QR code logo width in pixels
CheckInQRCodeHeight	int	Check-in QR code height in pixels
CheckInQRCodeWidth	int	Check-in QR code width in pixels
CheckInIsLogoOnQRCode	bool	Whether to show logo on check-in QR code

Field	Type	Description
CheckInQRLogoHeight	int	Check-in QR logo height in pixels
CheckInQRLogoWidth	int	Check-in QR logo width in pixels

Inventory

Field	Type	Description
QtyAvailable	long	Current available quantity
QtyTotal	int	Total session capacity
MinSessionQty	decimal	Minimum quantity per attendee
MaxSessionQty	decimal	Maximum quantity per attendee

Schedule

Field	Type	Description
StartDateUTC	DateTime	Session start date/time in UTC (ISO 8601)
EndDateUTC	DateTime	Session end date/time in UTC (ISO 8601)
StartDate	string	Session start date in event timezone (YYYY-MM-DD)
StartTime	string	Session start time in event timezone (12-hour format)
EndDate	string	Session end date in event timezone (YYYY-MM-DD)
EndTime	string	Session end time in event timezone (12-hour format)
StartDateUnix	long	Unix timestamp for start date
EndDateUnix	long	Unix timestamp for end date
TimeZoneId	int	TimeZone ID
TimeZone	string	TimeZone name
TimeZoneName	string	TimeZone display name
Duration	long	Duration in ticks
DurationText	string	Human-readable duration (e.g., "2h 30m")
ExternalLink	string	External link URL for the session

Media

Field	Type	Description
BannerImageId	long?	Banner image ID
BannerImage	object	Banner image details (ImageId, ImagePath, ImageName)
VenueMapImageId	long?	Venue map image ID
VenueMapImage	object	Venue map image details (ImageId, ImagePath, ImageName)
GalleryImages	array	Array of gallery images (ECImageId, ImagePath, ImageName)
GalleryVideos	array	Array of gallery videos (ECVideoId, VideoPath, VideoName, ThumbnailPath)

Related Entities

Field	Type	Description
Tickets	array	Array of mapped tickets (TicketId, TicketName, TicketDescription, Price, TicketType)
Venues	array	Array of venues (EventSessionLocationId, AddressId, VenueName, Address, VirtualEventRoomId, RoomName)
Categories	array	Array of categories (EventSessionCategoryId, CategoryId, CategoryName, AllowSessionSelection, AllowNoOfSession)
Speakers	array	Array of speakers (EventSessionMemberId, ECMemberId, FirstName, LastName, FullName, JobTitle, CompanyName, Description, Prefix, WebsiteURL, ImageId, ImagePath)
Sponsors	array	Array of sponsors (EventSessionMemberId, ECMemberId, CompanyName, WebsiteURL, ImageId, ImagePath)
Documents	array	Array of documents (ECEventSessionFileId, ECFileId, FileName, FilePath, UploadDateTime, FileSize, ContentType, Extension)
Polls	array	Array of polls/surveys (EventSessionPollId, SurveyPollId, PollName, PollType)
SubSessions	array	Array of sub-sessions with full details (see SubSession structure below)

SubSession Structure

Each sub-session contains:

Field	Type	Description
EventSubSessionId	long	Unique identifier for the sub-session
EventSessionId	long	Parent session ID
Title	string	Sub-session title
Description	string	Sub-session description
StartDateUTC	DateTime	Start date/time in UTC
EndDateUTC	DateTime	End date/time in UTC
StartDate	string	Start date in event timezone
StartTime	string	Start time in event timezone
EndDate	string	End date in event timezone
EndTime	string	End time in event timezone
StartDateUnix	long	Unix timestamp for start
EndDateUnix	long	Unix timestamp for end
MinSessionQty	decimal	Minimum quantity per attendee
MaxSessionQty	decimal	Maximum quantity per attendee
QtyAvailable	long	Available quantity

Field	Type	Description
Duration	string	Duration string
DurationText	string	Human-readable duration
Time	string	Formatted time with timezone
TimeZone	string	TimeZone name
Speakers	array	Array of speakers for this sub-session

Pagination Object

Field	Type	Description
PageIndex	int	Current page number (1-based)
PageCount	int	Total number of pages
ItemsPerPage	int	Number of items per page
TotalItemCount	int	Total number of sessions matching filters

Filtering Logic

Search Parameter

- Searches in: Title, Description
- Case-insensitive
- Partial match (contains)

Date Filtering

- startDate: Filters sessions where StartDateUTC >= startDate
- endDate: Filters sessions where EndDateUTC <= endDate
- Dates are parsed as UTC
- Both parameters can be used together for a date range

Sorting

Default Sorting: Sessions are ordered by StartDateUTC descending (latest first)

Usage Examples

Below are common use cases and example requests to help you get started with the API.

Example 1: Basic Pagination

Retrieve the first 10 sessions:

```
GET /v2/Public/Event/43611/Sessions?pageNumber=1&pageSize=10
Authorization: Bearer {your_token}
```

Example 2: Search Functionality

Search for sessions containing “keynote”:

```
GET /v2/Public/Event/43611/Sessions?search=keynote
Authorization: Bearer {your_token}
```

Example 3: Date Range Filter

Get sessions between specific dates:

```
GET /v2/Public/Event/43611/Sessions?startDate=2025-10-21&endDate=2025-10-22
Authorization: Bearer {your_token}
```

Example 4: Combined Filters

Search for workshops within a date range:

```
GET /v2/Public/Event/43611/Sessions?search=workshop&startDate=2025-10-21&endDate=2025-10-22&pageSize=20
Authorization: Bearer {your_token}
```

Example 5: Start Date Only

Get all sessions starting from a specific date:

```
GET /v2/Public/Event/43611/Sessions?startDate=2025-10-21
Authorization: Bearer {your_token}
```

Example 6: End Date Only

Get all sessions ending before a specific date:

```
GET /v2/Public/Event/43611/Sessions?endDate=2025-10-22
Authorization: Bearer {your_token}
```
